

Erratum

In the article by Haznedar and Eminođlu, entitled "An overlooked case of a treatable hyperinsulinemic hypoglycemia: congenital glycosylation defect type 1b" that was published in the March 2020 issue of the Turkish Archives of Pediatrics (*TurkArchPediater*; 55(1): 79–81, 10.5152/TurkPediaterArs.2018.18004), the authors erroneously stated the unit of the starting dose of Oral D-mannose treatment and would like to change the unit from "mg" to "gr".

The Editorial Board evaluated and approved their change request. Thus, the dose of the treatment has been corrected as "1.2 gr/kg/day q4 hours," and the article updated accordingly in the journal's archive. You may access the updated article via the link below.
